Oh-Haiku - the awesome Haiku detecting app for Android developers:

To get started with developing Oh-Haiku

1. Install Eclipse
2. Install the Android Development Toolkit
3. Get the correct Android API: API 8
4. Clone the project from Github
5. Create an Eclipse workspace in the `code` directory
6. Create a new Android Project, choose `Create project from existing source`, select the OhHaiku directory
7. Create a new Android Test Project, choose `Create project from existing source`, select the OhHaikuTest directory, choose the OhHaiku project as test target.

To use Emma to check for Test Coverage

1. Make sure you have ant installed.
2. Start your emulator.
3. Make an apk that is prepared for coverage testing:
   - Go to the main project folder and enter: `ant emma debug install`
   - Go to the test project folder and enter: `ant emma debug install test`And Voilà!
